

# The Church of St Mary and All Saints, Fotheringhay

## **Repair and Improvement Programme**

### **Progress Report**

The programme of repair and improvement work continues apace at the Church of Saint Mary and All Saints, Fotheringhay.

The scaffolding installation is progressing in accordance with the programme schedule and the site set up and welfare provisions are in place and fully functional. An additional unit has been erected on site to provide a store room and operatives' compound area and a further secure storage facility may be established in due course.

Weatherproofed scaffold hoarding, painted grey to reduce the visual impact and a security and health and safety requirement, is in position and gravestone and monumental protections have been completed in the immediate vicinity of the working areas.

Scaffolding security measures, including monitored alarm and CCTV systems approved by Ecclesiastical insurers, are operational and are in addition to and augment the permanent roof alarm system.

The church remains open to visitors and there is a specific segregated pathway to ensure their safety on entering the site.
